

Search Engineer

[Lincoln Deployed](#)

Full-time, Competitive Compensation & Benefits

Location: US Resident, All Remote Work

Job Description

We are building a strong team focused on rethinking how information is organized and unlocking new ways for end-users to access that information. Our team of engineers applies innovative algorithmic and machine learning concepts to indexing and filtering news.

We've got a lot of work carved out for us and are looking to expand our engineering team by adding a backend engineer to work on machine learning module. If your toolbox includes these technologies we'd love to hear from you: C/C++/Golang, machine learning, ElasticSearch/ELK, some Java/C#, some Python, DevOps.

Responsibilities:

- Design, develop, test, deploy, maintain and improve software with 1-2 collaborators.
- Manage individual project priorities, deadlines and deliverables.
- Define the best implementation method and related effort to answer a given problem.
- Identify and drive code improvements, including technical debt.
- Serve as an example of quality code and design, and push for better processes around how the team operates.
- Advocate for a solid technical approach and influence peers.

Experience and Skills Needed:

- 4+ years as a backend/full-stack developer (C/C++/Golang, machine learning, ElasticSearch/ELK, some Java/C#, some Python, DevOps.)
- Strong understanding of distributed search systems and their components (data ingestion, indexing, ranking algorithms, processing user queries, serving results)
- Hands-on experience setting up and configuring cloud based infrastructure (AWS/Google Cloud)
- Familiar with scaling and load balancing concepts
- Strong communication skills
- Must be US-based

About Lincoln Deployed - CallDeployed.com

What if you could rebuild Accenture today?

Join the Seal team 6 for all things organizational design, product and tech for civics & politics.

More directly, a full service consultancy that focuses on working with amazing civic and government partners to advance liberty.

Working alongside you, our nationwide community of exceptional technology professionals will provide on-demand expertise and hands-on assistance that will enhance your capacity to execute at the highest level. Together, we can accelerate the shift away from a predatory “beltway bandit” model and ensure that the American people benefit from technology worthy of the \$100+ Billion spent annually on it.

We offer a nice benefits package to employees, in addition to competitive salaries and the convenience of working from anywhere. Benefits include health/dental/vision insurance, 401K, tax-advantaged bonus structure, and a flexible vacation policy.
